

Thicker than most

At 38mm, Barefoot is thicker than most deck boards out there. Not only will this give you a deck that feels sturdy and solid underfoot but it will save you time and money too. 38mm decking will span joists spaced at 600mm centres rather than the standard 400mm. This means you will need fewer joists and deck screws and the deck will take less time to build.

Uses

Although this product is produced for decking with finished sizes of 38 x 90mm and 38 x 140mm it has a number of other uses including:

- Deck joists & beams (these are standard US joist sizes - nominal 2x4" & 2x6")
- Pergola beams & rafters
- Deck hand railing
- Wall studs for building
- Fence rails

Preservative Treatment

Canadian Barefoot is kiln dried and heat treated before treatment then returned to the kiln again after treatment for fixation to lock in the preservative.

Barefoot is treated with an advanced formulation of Alkaline Copper Quaternary (ACQ) providing you with all the benefits preservation technology offers in stopping premature aging, wet and dry rot, mould and insect attack. ACQ is a proven technology that represents the next generation in wood preservation. It can withstand harsh weather conditions and is effective for up to 50 years.

Safe for You and the Environment

ACQ treated timber is clean, odorless, non-staining and non-irritating to humans, animals and plants.
